

QA 4 Hours Exam

1. Write a simple “ATM” program.
 - a. Program should have 4 options: Balance, Deposit, Withdrawal,Quit
 - b. Balance - should display remaining balance
 - c. Deposit
 - i. Enter deposit amount
 - ii. Max deposit for the day = 150K
 - iii. Max deposit per transaction = 40K
 - iv. Max deposit frequency = 4
 - d. Withdrawal
 - i. Enter withdrawal amount
 - ii. Max withdrawal for the day = 50K
 - iii. Max withdrawal per transaction = 20K
 - iv. Max withdrawal frequency = 3
 - v. Cannot withdraw when balance is less than withdrawal amount
 - e. Quit
 - i. Should ask to confirm to quit
 - ii. End program
 - iii. Data should not persist, i.e. when the user quits and restarts,data should be reset.
2. Write tests against that program. Which tool(s) can you use to ensure proper code coverage? Bonus: implement the tool and show code coverage numbers for your tests.
3. Make sure your code is readable and can be run.
4. Check in your code to github and write instructions on README on how to run.

Sample Flow

1. Balance
2. Deposit

3. Withdrawal

4. Quit

Enter Menu Option

>
